***Allowable Subject Matter***

Claims 1-4 and 9-12 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance: the most relevant reference Leung et al. (US 7,246,373) discloses Leung discloses a method of communication between a private network ("Private Network" See figure 1 ref. no. 117) and a roaming mobile terminal ("Client" See figure 1 ref. nos. 103, 105 and col. 1 lines 49-66), the private network including a home agent ("VPN Server" See figure 1 ref. no. 107) for the mobile terminal and a gateway ("VPN Server" See figure 1 ref. no. 107) through which the communication passes and which provides security protection for the private network, the protocols of the communication ("IPsec" See col. 4 lines 65-67 and col. 5 lines 1-3) include security association bundles each including a security association between the mobile terminal and the gateway for inbound communication ("Subnetwork Address for Client" "Subnetwork Address for VPN Server" and "Enterprise Address" See col. 4 lines 12-49) and another security association for outbound communication ("Subnetwork Address for Client" "Subnetwork Address for VPN Server" and "Enterprise Address" See col. 4 lines 12-49), the method performing in response to a handover of communication causing an IP address of the mobile terminal to change to a new IP address ("Client moves from a first subnetwork to a second subnetwork" See col. 1 lines 49-66), the mobile terminal updates its inbound security association from the gateway so that it can receive packets sent to it with the new IP address as destination ("The VPN client automatically obtains a second subnetwork address" See col. 9 lines 13-15), the mobile terminal sends a first signaling message with the home agent as

destination in a secure tunnel to the gateway ("The VPN Client automatically attempts to re-establish the VPN tunnel by sending the second subnetwork address, a username, and a password to the VPN server" See col. 9 lines 13-37), the first signaling message indicating the new IP address in secure form to home agent ("VPN server and client allow encryption of messages" See col. 5 lines 32-43), the inbound security association of the gateway from the mobile terminal accepts the first signaling message without checking its source address ("The user name and password information are verified instead of the source address" See col. 5 lines 32-43), the gateway forwards the first signaling message within the private network to the home agent ("The examiner respectfully points out that the VPN server is being construed as being a part of the private network."), the home agent checks the validity of the first signaling message ("The user name and password information are verified instead of the source address" See col. 5 lines 32-43) and, if it is valid, updates its address data and sends a second signaling message to the gateway indicating the new address ("The VPN server will generate an internal message to grant the client access to virtual private network by updating the subnetwork address of the client in response to verification of the user name and password" See col. 5 22-43), and the gateway updates its outbound security association with the mobile terminal in response to the new address indicated ("The tunnel to the VPN server is created" See col. 9 lines 13-37).

The communication protocol disclosed by Leung to provide secure seamless mobile communications between a private network client and a private network server does not use care-of IP addresses. The communication protocol disclosed by Leung

instead uses a permanent enterprise address and a variable subnetwork address to provide secure seamless mobile communications. The permanent enterprise address is an IP address while the subnetwork address is an address specific to the private network client which is uniquely defined within a private network. Leung teaches away from providing secure seamless using protocol that rely on care-of addresses, such as mobile internet protocol, by stating that "However, many conventional MobileIP standards do not provide for secure connections." (See Leung col. 2 lines 3-9)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
